Security Scan Summary

OrangeHRM (orangehrm/orangehrm) — branch: main

Scan run: 20261106 (3)

NEEDS ATTENTION

Scan type	Result (C/H/M/L)	Failure reason	Detail PDF
SCA (snyk test)	5C 36H 64M 4L	-	orangehrm_SCA.pdf
SAST (snyk code test)	1H 11M 175L	-	orangehrm_SAST.pdf
Secrets (gitleaks)	358 secret(s)	-	orangehrm_gitleaks.pdf
Trivy config (Dockerfile)	1H 1L	-	orangehrm_trivy.pdf

How to read this

NEEDS ATTENTION = findings at Medium severity or above (or secrets) exist in at least one scan. SAFE = all applicable scans completed with no Medium+ findings and no secrets. FAILED = a scan could not complete; this does NOT mean the code is safe, it means that aspect was not actually checked. '-' means the scan was not applicable (e.g. no Dockerfile for Trivy).

Dependency CVEs shown here (SCA) are already public in the NVD/CVE databases; Snyk only surfaces information that is already public. No exploit-level detail is included for any unpatched critical finding.
